Parade Responsible Minerals Policy Statement

Parade understands that metal minerals mined in the Democratic Republic of the Congo and adjoining countries，or other Conflict-Affected and High-Risk Areas may be making their way into the electronics supplier chain, and that profits from illegal mining may be fueling human rights atrocities. We take these concerns, both as reflected in recent public concerns as well as in concerns expressed by our customers, very seriously, and are committed to using only minerals that do not stem from improper activities.

Parade expects our suppliers to share our commitment to responsible sourcing of minerals, and to only source minerals from environmentally and socially responsible suppliers. Parade further expects that our suppliers will comply with applicable standards set forth in governing law or in applicable industry standards relating to responsible sourcing of minerals. Due to the complexities of the semiconductor industry supply chain, we currently utilize CMRT/EMRT to collect responsible minerals information from our direct subcontractors regarding the origin of minerals used in materials provided to us for use in our products, and to verify compliance with relevant legislation.

“Conflict minerals” include Tantalum, Tin, Gold and Tungsten（3TG）. Smelter information from our supplier's supply chain must be disclosed, using the Conflict Minerals Reporting Template（CMRT）for any conflict minerals used in, or used in the production of, any parts, materials, components, or products provided to or for Parade.

Parade also encourages direct subcontractors whose products contain cobalt to implement due diligence measures for cobalt souring and submit Minerals information by using the standardized The Extended Minerals Reporting Template (EMRT).

To the best of our knowledge, a sufficient number of smelters and refiners have been validated through independent third-party assessment firms by evaluating materials traceability based on a defined standard to allow sourcing of the noted materials only from validated responsible parties. Parade therefore expects suppliers to establish and implement due diligence management system, and to only source materials from validated conformant smelters or refiners for the production of any parts, materials, components, or products for Parade.

Company Name: Parade Technologies, Ltd.
